

Identification Technology

What is DataDot Protection?

DataDots are state-of-the-art identification technology, which allows your vehicle to be effectively marked with its own “DNA” type identification. They are encoded with microscopic identification information that is easy for law enforcement to trace.

The Ultimate Theft Deterrent System.

DataDot Features

- The unique DNA code is registered on a secure International database
- Stays on for the life of the vehicle
- An effective way of preventing vehicle theft and subsequent parts sales
- Approved by the (IAATI) International Association of Auto Theft Investigators
- A replacement benefit is provided if the vehicle is stolen and not recovered
- Deductible reimbursed if the vehicle is recovered and requires repairs
- Professional thieves steal vehicles and vehicle parts that they can sell quickly and easily. They will unlikely steal a vehicle they cannot sell
- DataDots are encoded with microscopic identification information that is easy for law enforcement to trace
- DataDots are suspended in a clear-drying liquid adhesive with UV elements
- Law enforcement only needs to locate one DataDot using a 30x magnifying device to obtain your unique vehicle identification number; no complicated forensic technology is needed
